The R Project for Statistical Computing

Getting Started

R is a free software environment for statistical computing and graphics. It compiles and runs on a wide variety of UNIX platforms, Windows and MacOS. To [download R](#), please choose your preferred [CRAN mirror](#).

If you have questions about R like how to download and install the software, or what the license terms are, please read our [answers to frequently asked questions](#) before you send an email.

News

- [Kalibera Family Fund](#) accepts donations until the end of 2026.
- [R version 4.6.1 \(Happy Hop\)](#) has been released on 2026-06-24.
- [R version 4.5.3 \(Reassured Reassurer\)](#) (wrap-up release) was released on 2026-03-11.
- The [useR! 2026](#) conference took place in Warsaw, Poland, July 7-9.
- You can support the R Foundation with a renewable subscription as a [supporting member](#).

Social Media

Follow the R Foundation on [BlueSky](#), [Mastodon](#), or [LinkedIn](#).

Download and Install R

Precompiled binary distributions of the base system and contributed packages, **Windows and Mac** users most likely want one of these versions of R:

- [Download R for Linux](#) ([Debian](#), [Fedora/Redhat](#), [Ubuntu](#))
- [Download R for macOS](#)
- [Download R for Windows](#)

R is part of many Linux distributions, you should check with your Linux package management system in addition to the link above.

Source Code for all Platforms

Windows and Mac users most likely want to download the precompiled binaries listed in the upper box, not the source code. The sources have to be compiled before you can use them. If you do not know what this means, you probably do not want to do it!

- The latest release (2026-06-24, Happy Hop) [R-4.6.1.tar.gz](#), read [what's new](#) in the latest version.
- The CRAN directory [src/base-prerelease](#) contains R alpha, beta, and rc releases as daily snapshots in time periods before a planned release.
- Between releases, the same directory [src/base-prerelease](#) contains snapshots of current patched and development versions. Please read about [new features and bug fixes](#) before filing corresponding feature requests or bug reports.
- Alternatively, daily snapshots are [available here](#).
- Source code of older versions of R is [available here](#).
- Contributed extension [packages](#).

R-4.6.1 for Windows

[Download R-4.6.1 for Windows](#) (88 megabytes, 64 bit)

[README on the Windows binary distribution](#)

[New features in this version](#)

This build requires UCRT, which is part of Windows since Windows 10 and Windows Server 2016. On older systems, UCRT has to be installed manually from [here](#).

If you want to double-check that the package you have downloaded matches the package distributed by CRAN, you can compare the [md5sum](#) of the .exe to the [fingerprint](#) on the master server.

Frequently asked questions

- [Does R run under my version of Windows?](#)
- [How do I update packages in my previous version of R?](#)

Please see the [R FAQ](#) for general information about R and the [R Windows FAQ](#) for Windows-specific information.

Other builds

- Patches to this release are incorporated in the [r-patched snapshot build](#).
- A build of the development version (which will eventually become the next major release of R) is available in the [r-devel snapshot build](#).
- [Previous releases](#)

Note to webmasters: A stable link which will redirect to the current Windows binary release is

[<CRAN.MIRROR>/bin/windows/base/release.html](http://CRAN.MIRROR/bin/windows/base/release.html).

RStudio is available in open source and commercial editions and runs on the desktop (Windows 11, macOS 14+, and Linux) or in a browser connected to RStudio Server or Posit Workbench. Development of the open source and commercial RStudio IDE variants is supported by Posit Software, PBC (formerly named RStudio, PBC). Please review our [Blog post/FAQ](#)  for additional

De

Podemos ejecutar el código con el boton Run

The screenshot shows an R console window with three tabs: 'Console', 'Terminal', and 'Background Jobs'. The 'Console' tab is active, displaying the following R code and its output:

```
> area_rectangulo <- function(base, altura) {  
+   base * altura  
+ }  
> volumen_esfera <- function(radio) {  
+   4 / 3 * pi * radio^3  
+ }  
> area_rectangulo <- function(base, altura) {  
+   base * altura  
+ }  
> volumen_esfera <- function(radio) {  
+   4 / 3 * pi * radio^3  
+ }  
> area_rectangulo(3, 5)  
[1] 15  
> volumen_esfera(2)  
[1] 33.51032  
>
```

The output shows the results of the function calls: 15 for the area of a rectangle with base 3 and height 5, and 33.51032 for the volume of a sphere with radius 2.
